**Subject:** Microsoft Settlement

I don't think the federal government and some of the other states which are included should settle with Microsoft under the current proposed terms. Microsoft has been a market predator! It has and continues to use its vastly superior position to unfairly dominate and illegally disadvantage small software companies. Microsoft will continue to do so after the current proposed settlement just as the tobacco industry has done. Fortunately, there are still many states unwilling to settle under the current proposed terms. Sincerely yours, Dean Larsen
